ACQUIS BI DEVELOP BAHAMAS SPATIAL DATA INFRASTRUCTURE & PLANNING PILOT SYSTEM

Now government agencies can develop their own enterprise geospatial SaaS solutions for their citizens.

Los Gatos, California, 1BDecember 1, 2014– AcquisCONNECT could soon provide the National Geospatial Data Infrastructure for Ministry of Environment & Housing in the Bahamas, following the successful completion of a Collaborative Enterprise Spatial Planning application for the islands.

“Acquis BI have been working in the location intelligence world for some time. A cloud geospatial solution built in a java environment is timely and cost effective.” said Audrey McKeown C.E.O. of the Acquis BI. “Government agencies are increasingly accepting the benefits of cloud solutions as a gateway to engaging citizens and providing services to them.

Citizens are becoming more mobile savvy and engaged in real-time technology, in addition mapping is now prolific in the mobile apps world. Citizens have been ready for some time but now government departments are starting to see the benefits of faster more collaborative interaction to streamline operations, improve safety, and cut costs. AcquisCONNECT provides agencies with a single geospatially enabled enterprise cloud platform which enables both external parties and internal departments to access and process planning applications with real-time collaboration tools. Each party sees only the information or parts of the application that is relevant to their role and permission within each organization.

Acquis BI Technology

Acquis BI is a technology company founded in 2006 to develop business intelligence and collaboration technologies targeted at the government industry. In 2012 Acquis BI decided to extend our enterprise web and cloud expertise deliver a single integrated geospatial platform to address the complexities of location intelligence and geospatial feature editing within the enterprise.
